

Field-based data collection can be difficult, costly and time-consuming. Transform your research process with **Survey Booth**, an innovative and cost-effective web-enabled tool designed specifically for collecting and processing research data.

BENEFITS:

- Investigator control over the design and publishing of a web-enabled survey through a service or through a web-enabled user interface
- Ability to publish iterative versions of an instrument to the Web for live field testing
- Secured scheduling for completion of pre-intervention and post-intervention survey results
- Data collection that enforces standards and validation filters in the field – minimizes data cleansing at analysis
- Upon survey completion the delivery of a file in the format specified – MS Excel, SPSS, CSV
- Multiple formats for types of data collected including surveys, forms and files

GETTING STARTED:

- Quickstart: \$499 per survey set-up and data transfer fee
- Survey: \$5 per person/per survey/per year fee with discounted rates for samples exceeding 400 respondents

Contact Maplewood Software today for an online demonstration of **Survey Booth**, the most innovative data collection tool on the market designed with researchers, for researchers. Let our team of experts demonstrate how you can create a streamlined, efficient data collection process.
